Hejia Chen（陈禾嘉）

Address: Beijing TEL: 155-1034-3075 Homepage: https://harryxd2018.github.io
Email: chenhj2000@163.com, chenhj2000@stu.xidian.edu.cn

Education Background

B.S: Xidian University, School of Computer Science and Technology, Internet of Things.

GPA: 86.6 **Ranking:** 6/44（13%） **English Scores:** CET4-585, CET6-572, TOEFL-96

Core GPA：90.8 (Top 1 in the major on *Discrete Mathematics*, *Computer Architecture*, and *Computer Networks*， and 90+ on all mathematics and most computer courses)

Research Experiences

A. Computer Vision (Since 2020)

In charge of **Engagement Prediction** and **Head Pose Estimation** tasks in the project:

1. **Engagement Prediction:** Devised a functional prediction model based on ICMI proceedings.
2. **Head Pose Estimation:** Wrote a survey on common datasets and SOTA models. Currently working on a prototype model.

B. Natural Language Processing (Since 2019)

Participated in article Q&A project, using regular expressions, word embeddings, etc. Collected geo-corpus and established a geometric knowledge database. This work was published at KDIR2020.

Research Ability

1. Skilled at Python and AI libraries; Posted neural networks projects to GitHub.
2. Good command of English. Able to read academic papers and communicate with English-speaking instructors and researchers without language barriers.
3. Skilled at finding SOTA models from top conferences and arXiv, analyzing advantages and disadvantages, and applying them to solving new problems. Enjoy watching academic seminars, including CVPR seminar held by MSRA.
4. Good at problem solving. I have communicated with authors from the CAS, and authors from other countries including the US, S. Korea, Italy and India to obtain insights for solving difficult problems.
5. Posted a number of CSDN blogs inspired by Andrew Ng's ML and CV courses.

Sharing And Leadership

1. Posted 30+ CSDN blogs, with 36K+ visits and 60+ subscribers.
2. Joined the School's Math & Program seminar as a team leader on various topics on coding and discrete math.
3. Gave an invited tutorial on Git and LaTeX to graduate students in the lab.
4. I was course coordinator for *Network* and *Calculus*. To meet the instructors' need, I organized group discussing and presentations successfully.
5. Teamed up with classmates and friends on coding via GitHub.

Skills

Programming: Master at Python, good at Java, SQL, MATLAB, HTML, C/C++ and CUDA.
Data processing and AI: Master at Python libraries like Pandas, Pytorch and Tensorflow2.
Other: Master at Git, LaTeX and Ubuntu.

Awards

1. 2019-2020 Outstanding student, School of Computer Science and Technology
2. 2019 2nd prize winner, Shaanxi Province, National Mathematical Contest in Modeling

Extracurricular Activities

Traveling, TV series, Music and Chinese Crosstalk.
